1. Dashboard (was ein PM als erstes morgens sieht)

2. Workflow Automatisierung

1. Dashboard (was ein PM als erstes morgens sieht)

1

When clicking here:

We reach portfolio view and see all steps that have been completed

Automation completed: symbol for automation?

0/3 waiting for all cashflows
1/3 publish cash & check portfolio
2/3 optimize portfolio
3/3 Run PTC

Now at step :

Approve PTC overrides (symbol for manual step?)

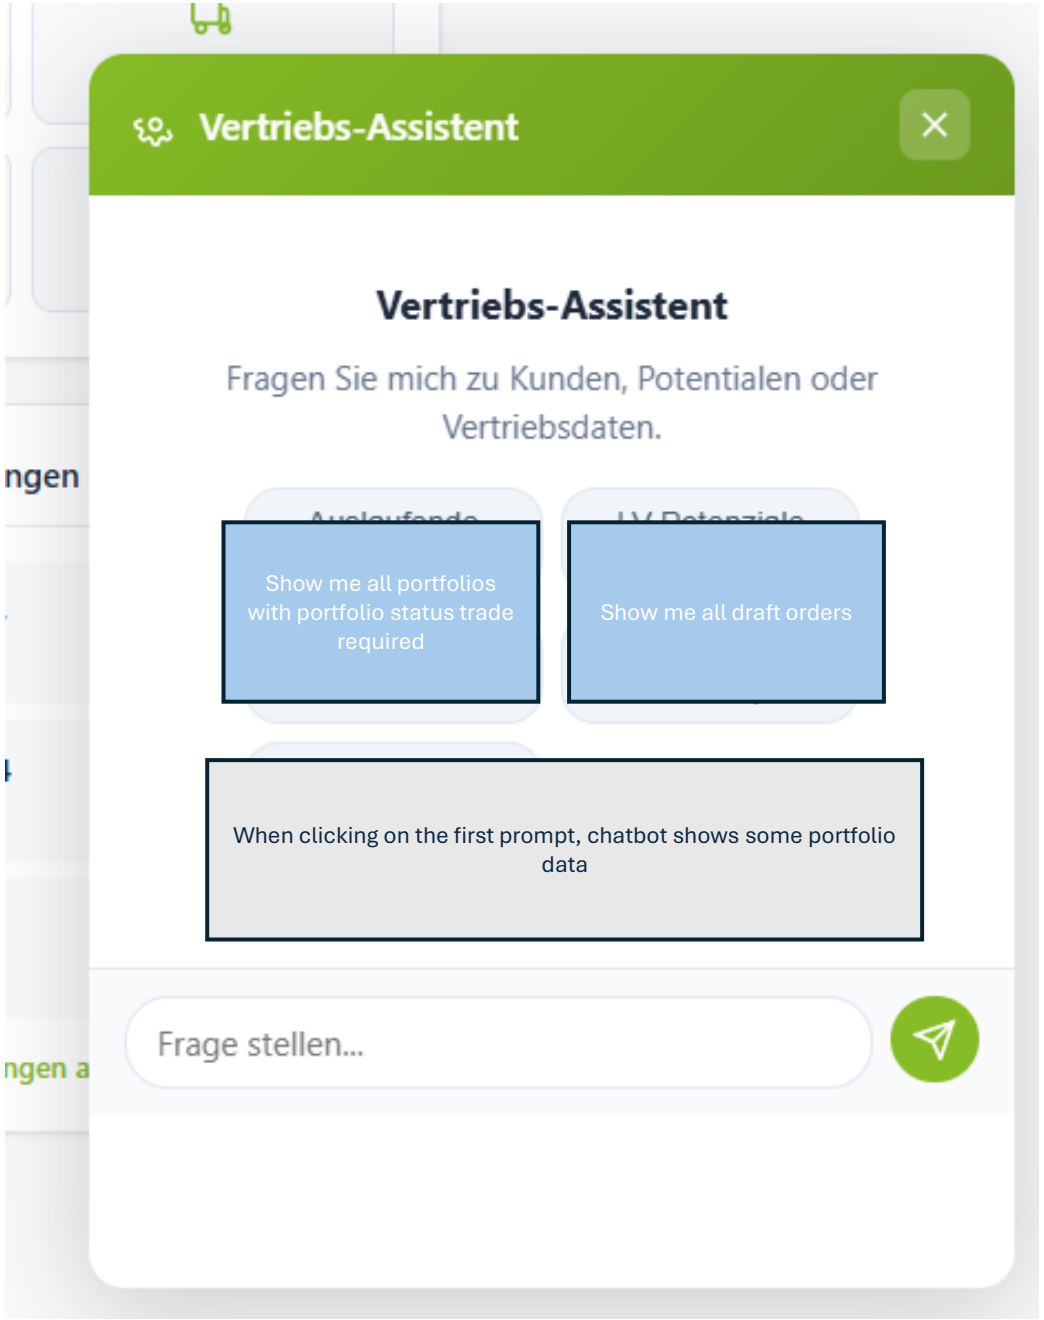

User can click on approve and then workflow action jumps from “approve PTC overrides” to “Request 4-eye check”, user confirms and clicks on “Send orders”

2

When going back to start page, this portfolio appears now under “completed” and workflow action changed from “awaiting approval” to “completed”

3

3. Chatbot

Vertriebs-Assistent
Vertriebs-Assistent
Fragen Sie mich zu Kunden, Potentialen oder Vertriebsdaten.
Show me all portfolios with portfolio status trade required
Show me all draft orders
When clicking on the first prompt, chatbot shows some portfolio data

Konzept für ein Portfolio-Management Dashboard

Zielsetzung des UI:

Das Interface soll Portfolio Manager dabei unterstützen, schnell zu erkennen, welche Portfolios sofortige Aufmerksamkeit benötigen, und gleichzeitig einen einfachen Zugriff auf Cashflow-Daten und Start-of-Day-Informationen bereitzustellen. Fokus liegt auf Übersichtlichkeit, klaren Prioritäten und automatisierten Workflows.

Startseite – Tab „Event Monitor“ (Default Landing Page, zeigt alle Portfolios, die eine unmittelbare Prüfung oder Aktion benötigen. Der Benutzer soll auf einen Blick alle offene Aufgaben sehen)

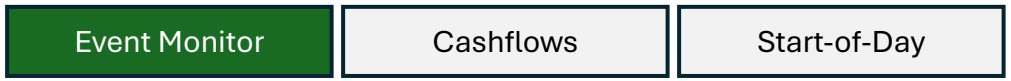

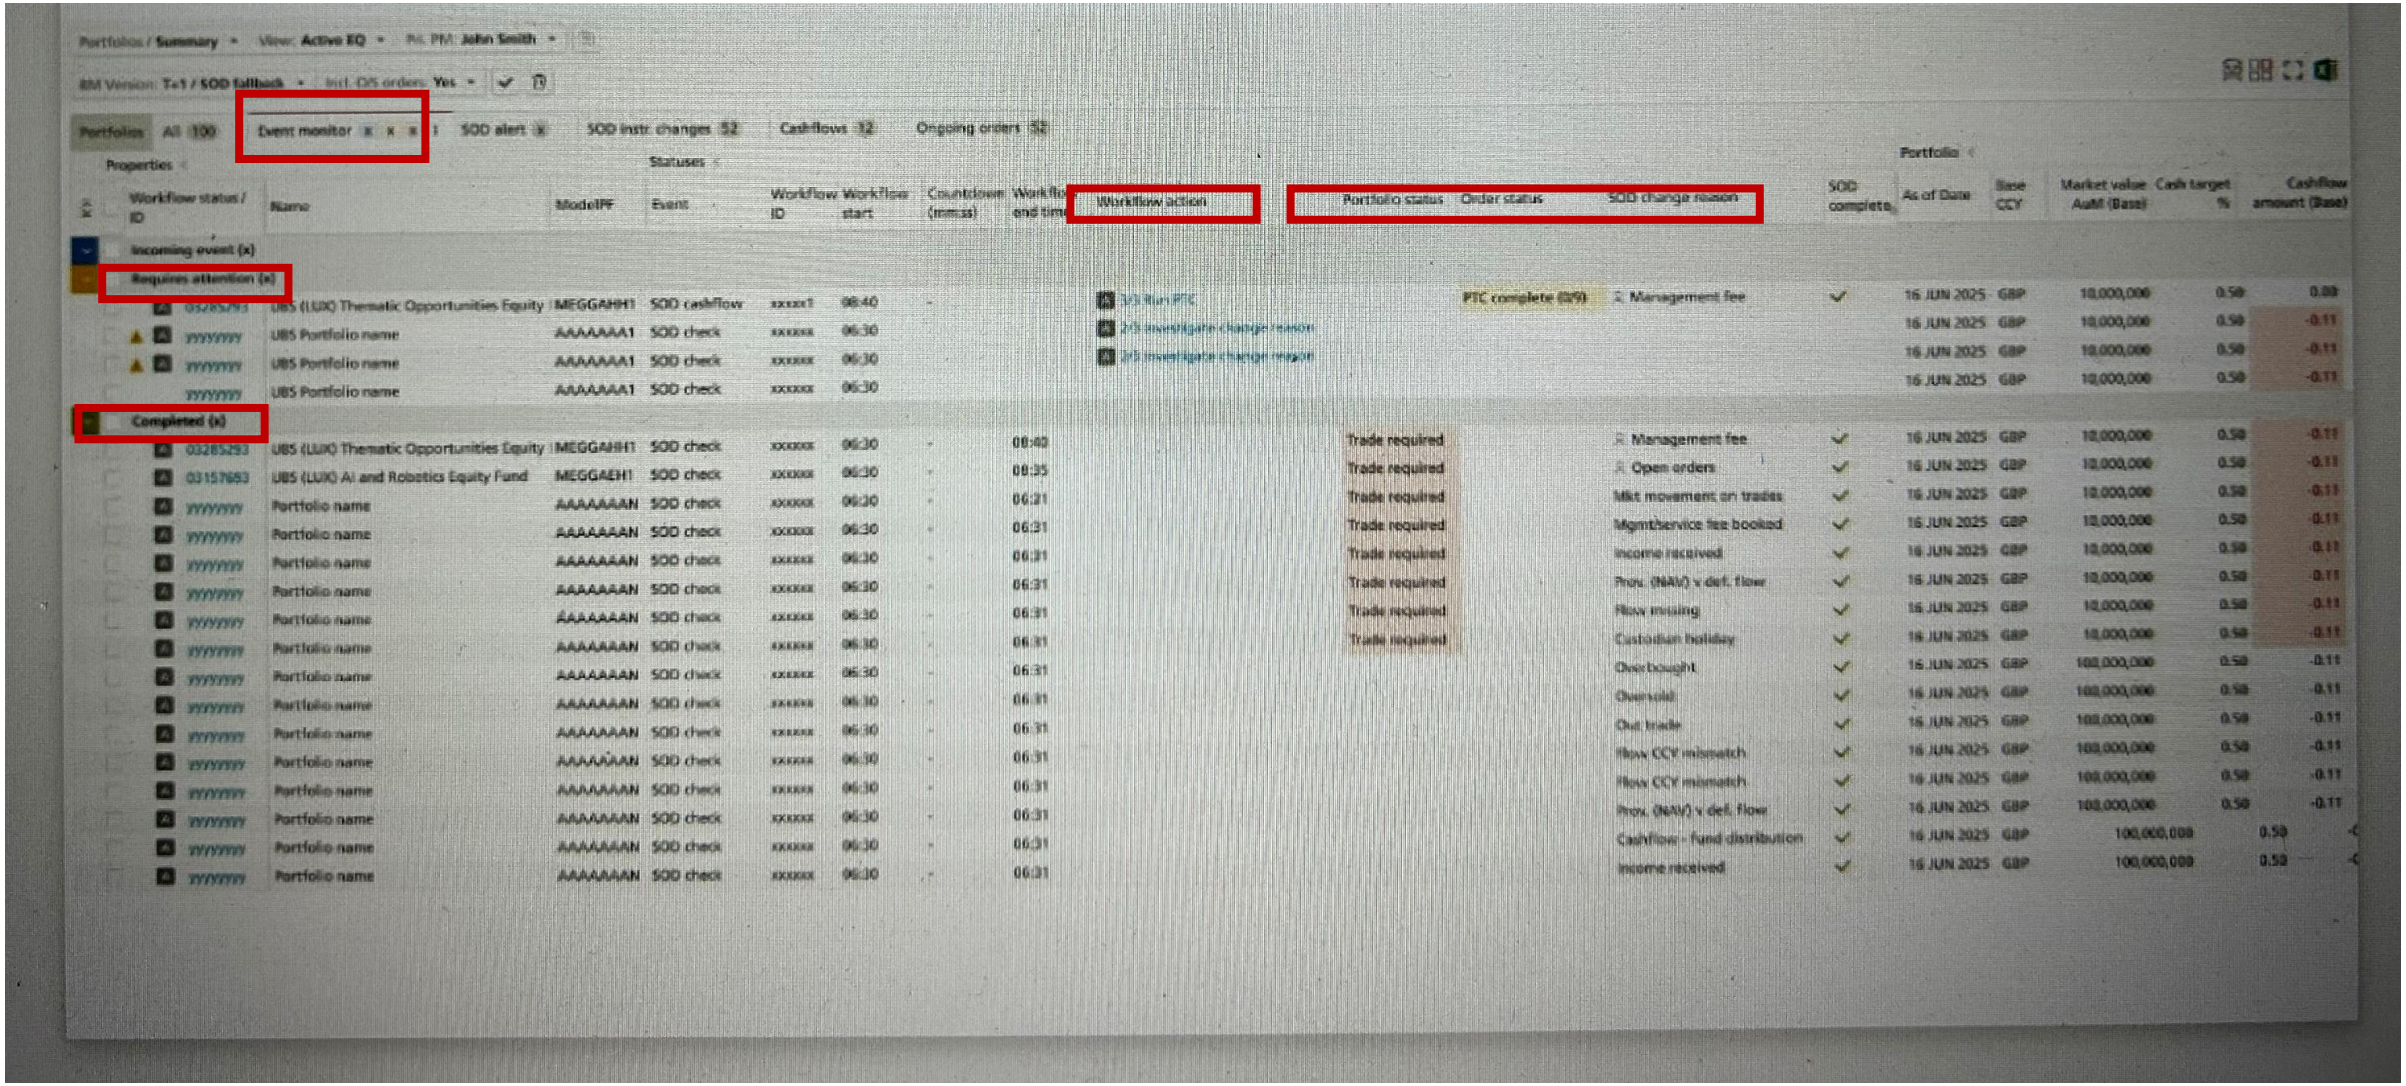

Tabelle mit Portfolio Daten z.B.
- Portfolio ID
- Portfolio name
- Base Currency
- Event (Cashflow check oder SOD check)
- Workflow ID
- Workflow action
- Portfolio status
- SOD change reason
- Chash target %
- Cash drift %
- Traded cash %

Tabelle ist unterteilt in zwei Bereiche:
1. Requires attention
2. Completed

Konzept für Cashflows

Deep Dive Tab neben „Event Monitor“ Tab, Cashflows Tab zeigt alle Portfolios, die gerade die Cashflow Automatisierung durchlaufen

Event Monitor | **Cashflows** | Start-of-Day

3 Schritte der Automatisierung:

1. Wait for all cashflows (3min timer to consolidate cashflows)
    a) Falls cash target breached > portfolio status ändert sich zu “trade required”

2. Optimize portfolio
    a) Falls “trade required” > rebalancing required, orders werden automatisch generiert

3. Run PTC (pre-trade compliance check)
    a) Pre-trade compliance checks werden für alle generierten Orders durchgeführt
    b) Order status ändert sich zu “PTC completed”

Manuelle nächste Schritte:
- Approve PTC overrides
- Request 4-eye check
- Send orders (portfolio status ändert sich zu “trading”)

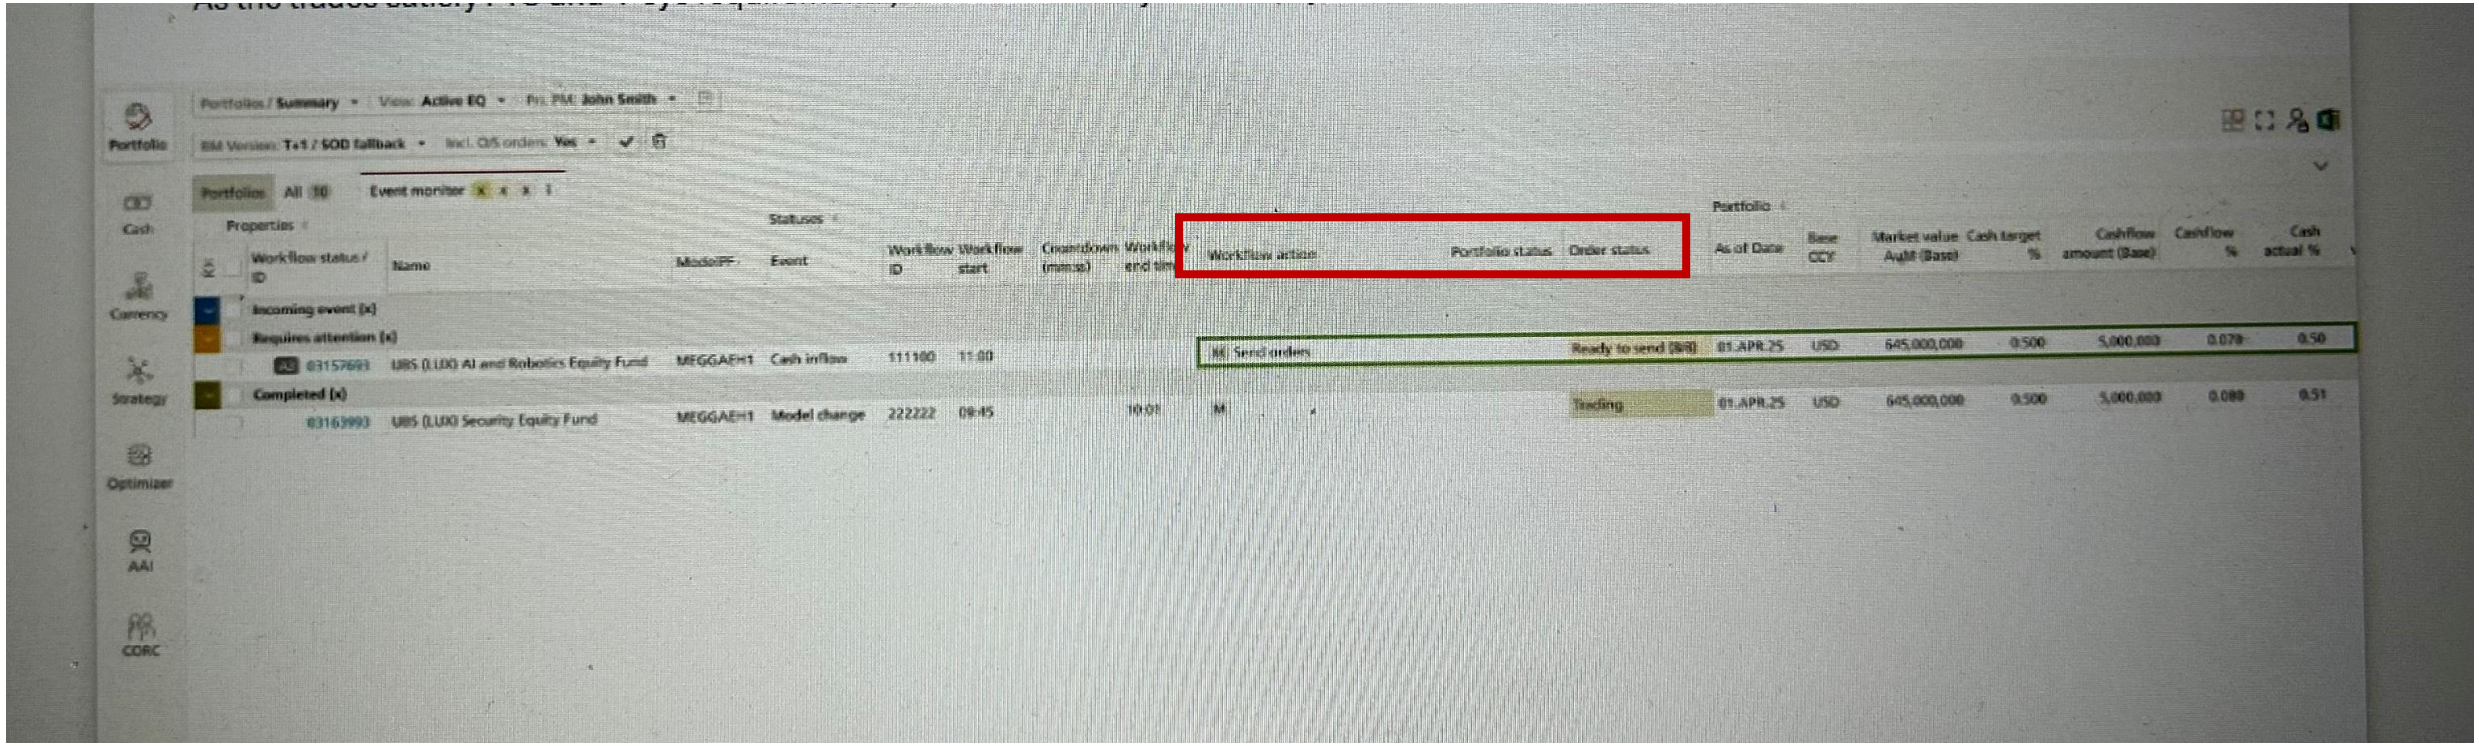

Portfolio Details wie Name etc. bleiben gleich, 3 Spalten ändern sich:

1. **Workflow action**
    Automatisierte Schritte:
    1. 0/3 waiting for all cashflows
    2. 1/3 publish cash & check portfolio
    3. 2/3 optimize portfolio
    4. 3/3 Run PTC

    Manuelle Schritte:
    1. Approve PTC overrides
    2. Request 4-eye check
    3. Send orders

2. **Portfolio status**
    1. Leer oder “trade required” falls cash targets breached

3. **Oder status**
    1. **Draft** (Status wenn 2/3 optimize portfolio)
    2. **PTC completed** (wenn manueller approve PTC overrides check completed)
    3. **Ready to send** (wenn manueller 4-eye check completed)
    4. Nach manuellem “send orders” ändert sich order status to **“trading”**

Konzept für Start-of-Day

Deep Dive Tab neben „Event Monitor“ und “Cashflows” Tab, Start-of-Day Tab zeigt alle Portfolios, die gerade die Start-of-Day Automatisierung durchlaufen

Event Monitor	Cashflows	Start-of-Day

Schritte der Automatisierung

Workflow actions:

1. Investigate change reason (automated)
    a) Automatische Generierung der vorliegenden change in cash reasons
2. Check portfolio (manuell)
    a) Automatisch generierte Change Reason wird manuell confirmed

Spalte “SOD change reason”
- z.B. flow missing, overbought/oversold, income received, etc.
- Falls automatisierter workflow nicht erfolgreich > manuelle Auswahl der change reason durch drop-down möglich

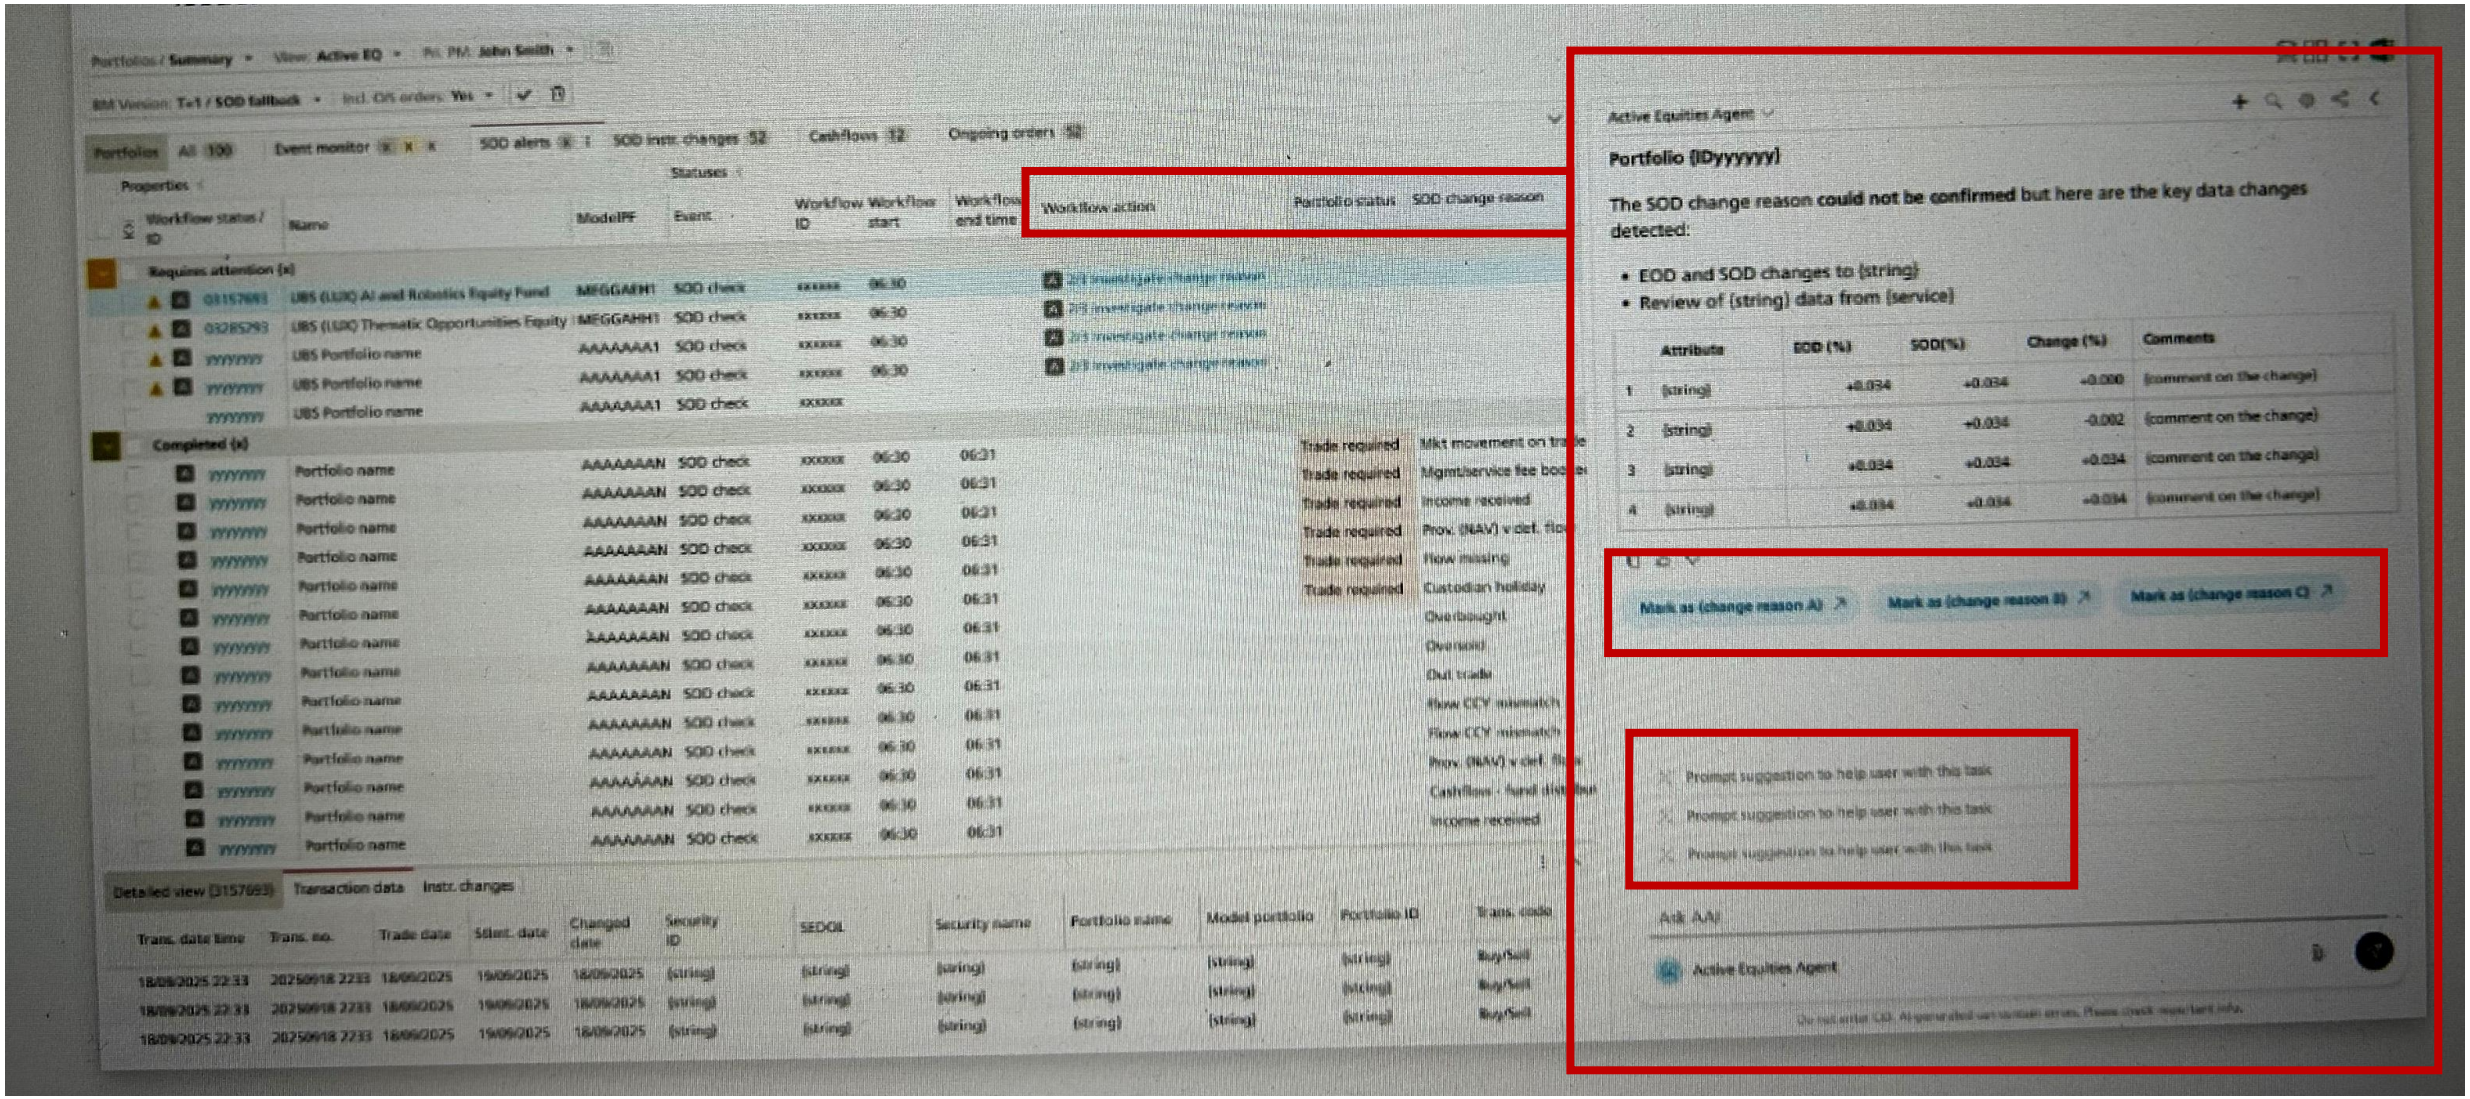

Spalte “SOD complete”
- Grüner Haken falls SOD reason confirmed

Chatbot Fenster öffnet sich: falls keine automatische Generierung der change reasons möglich:

Chatbot Fenster zeigt…

1. **Portfolio Daten**
2. **Transaktionsdaten**
3. **…**

Dem Portfolio Manager werden pre-populated prompts angeboten, z.B. “mark as change reason A” oder “show instrument changes”
